Remicade infusion guide

CP-53017v3 The following severe secondary effects (sometimes fatal) were reported in people to take Remicade®. **CAUTION: "any changes or growth in the skin. Some of these infections were fatal. What should I observe and talk to my doctor before or during treatment with Remicade®? Your doctor should carefully monitor you to detect signs and TB symptoms during treatment with Remicade®. Reactivation of the VHB (hepatitis B virus), lack of appetite, tiredness, fever, cutaneous eruption and / or pain in the joints. Visit www.fda.gov/medwatch or call 1-800-FDA-1088. If you have latent (inactive) TB treatment will start before you start Remicade®. Blood problems (anemia, low white blood cell count, low platelet count) may occur. Tell your doctor if you have any of the following: tuberculosis (TB) and infections caused by virus, fungi or bacteria that spread through the body or caused infections at certain (like the skin). What should I say to my doctor before taking Remicade®? Pour in the following 24 hours to the perfusion "sleep or weakness of the face, arm or leg, especially on one side of the body; confusion, difficulty to speak or understand; difficulty in seeing in one or both eyes; problem in walking; dizziness; loss of equilibrium or coordination; or a severe and severe headache. Your doctor will examine you for VHB detection. Retarded and retarded reactions (3 to 12 days after the perfusion) "fever, cutaneous eruption, headache, sore throat, muscle or articular pain, swelling of the face and or difficulty swallowing. If you are pregnant, planning to become pregnant, breast-feeding, or Breastfeeding or having a baby and were using Remicade® during pregnancy. Recently or are scheduled to receive a vaccine. Remicade® can make it more prone to contracting an infection or making any infection that you have worse. For children and adults to take TNF blockers, including Remicade®, the likelihood of lymphoma or other cancers may increase. Nervous system diseases (such as Multiple Sclerosis or Guillain-Barrière Syndrome). Any type of Cancer or Risk Factor for the Development of Cancers, for example, Crohn's disease, obstructive pulmonary disease (COPD) or phototherapy for psoriasis. Your doctor will check if you have TB with a tuberculin test. You must tell your doctor if you have or have already had any of the following: tuberculosis (tb) or were near someone who has tb. Psoriasis (skin rash) and other conditions. Tell your doctor - Baby on your Remicade® uses. Use of the T lymphocyte lymphoma T, a rare form of fatal lymphoma, occurred mainly in male adolescents or young men with Crohn's or ulcerative colitis that were taking Remicade® and Azathioprine or 6-mercaptopurine. Only your doctor can recommend a course of treatment after checking your state of health. You are encouraged to report negative side effects of prescribed medications for the FDA. Many people with cardiac insufficiency should not take Remicade®. Hepatic lesion (dark chestnut urine, pain on the right side of the stomach, fever or severe tiredness. He lived in a region where certain parasitic infections like histoplasmosis, coccidioidomycosis or blastomycosis are common. The most frequent side effects associated with REMICADE® include respiratory infections (such as sinusitis and sore throat), aches Head, cough and stomach pain. Cardiac insufficiency "new or worsening symptoms, such as lack of air, swelling of ankles or feet, or increased weight. Weight. you should tell your doctor immediately if you have any of the signs listed below: Severe infections (such as TB, blood infections, pneumonia) - fever, tiredness, cough, flu-like symptoms, or hot, red or painful skin or any open wounds. It is not known if Remicade® is safe and effective in children under 6 years of age. Remicade® (infliximab) can cause serious side effects, such as decreasing your ability to fight infections. Please read the full prescribing information and the Medication Guide for Remicade® and discuss any questions you have with your doctor. Lymphoma, or any other types of cancer in adults and children. Allergic reactions during or after the infusion "difficulty breathing, chest pain, high or low blood pressure and fever or chills. Also tell your doctor if you: use the medicines Kinect (Anakinra), Orencia (Abatacept) or Actemra (tocilizumab) or other medicines called biologics used to treat the same problems as Remicade®. Unusual cancers have been reported in children and patients with adolescents taking tumor necrosis factor (TNF) blocker drugs. Nervous system disorders - changes in your vision, numbness or tingling anywhere in your body, convulsions, or weakness in your arms or legs. Infections that keep coming back, have diabetes or an immune system problem. If your baby receives a live vaccine within 6 months after birth, your baby may develop infections with serious complications that can lead to death. Cervical Cancer - your doctor may recommend that you be screened regularly. Hepatitis B virus (HBV) infection or think you might be a carrier of HBV. Heart failure or any cardiac condition. Other cardiac problems within 24 hours of infusion, including heart attack, low blood flow abnormal heart or rhythm card - discomfort or pain, pain in the arm, pain in the arm, shortness of breath, anxiety, dizziness, dizziness, fainting, sweating, nausea, vomiting, trembling or beating the chest, and / or a Fast a slow heartbeat. You should discuss any concerns about your health and medical care with your doctor. Some women with rheumatoid arthritis, particularly those over 60, have developed cervical cancer. Cancer.**
